Practical 10 - Internetworking.

10(a) Internetworking Using Router

Aim:

To design and configure a simple internetworking using a router in Cisco Packet Tracer and verify the connectivity between two PCs.

Observation:

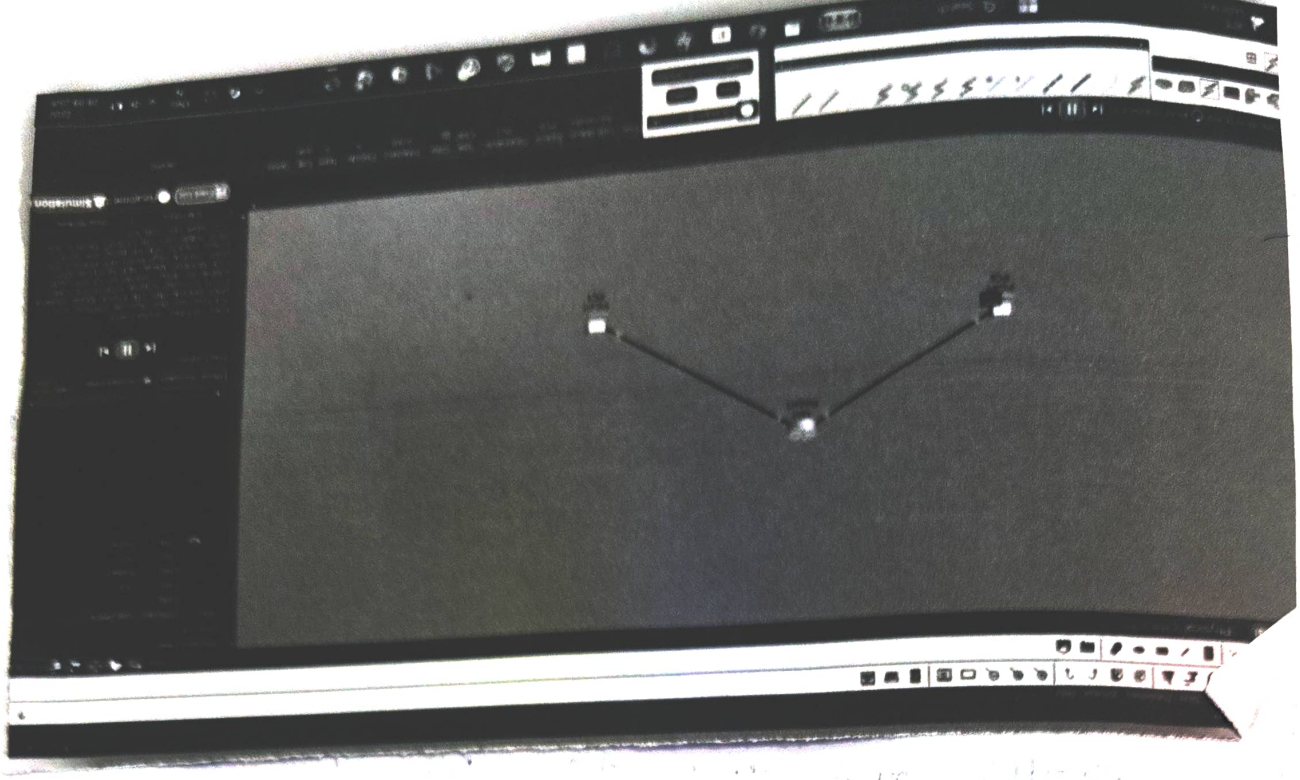

1) A router and Two PCs. are used to create a simple internetwork

2) PC0 is connected to the first interface of Router1 using a copper straight-through cable.

3) Router interfaces are assigned different network addresses:

- 192.168.10.1/24
- 192.168.20.1/24

4) The router forwards packets between the Two different networks.

Result:

Hence PL PS successfully executed.

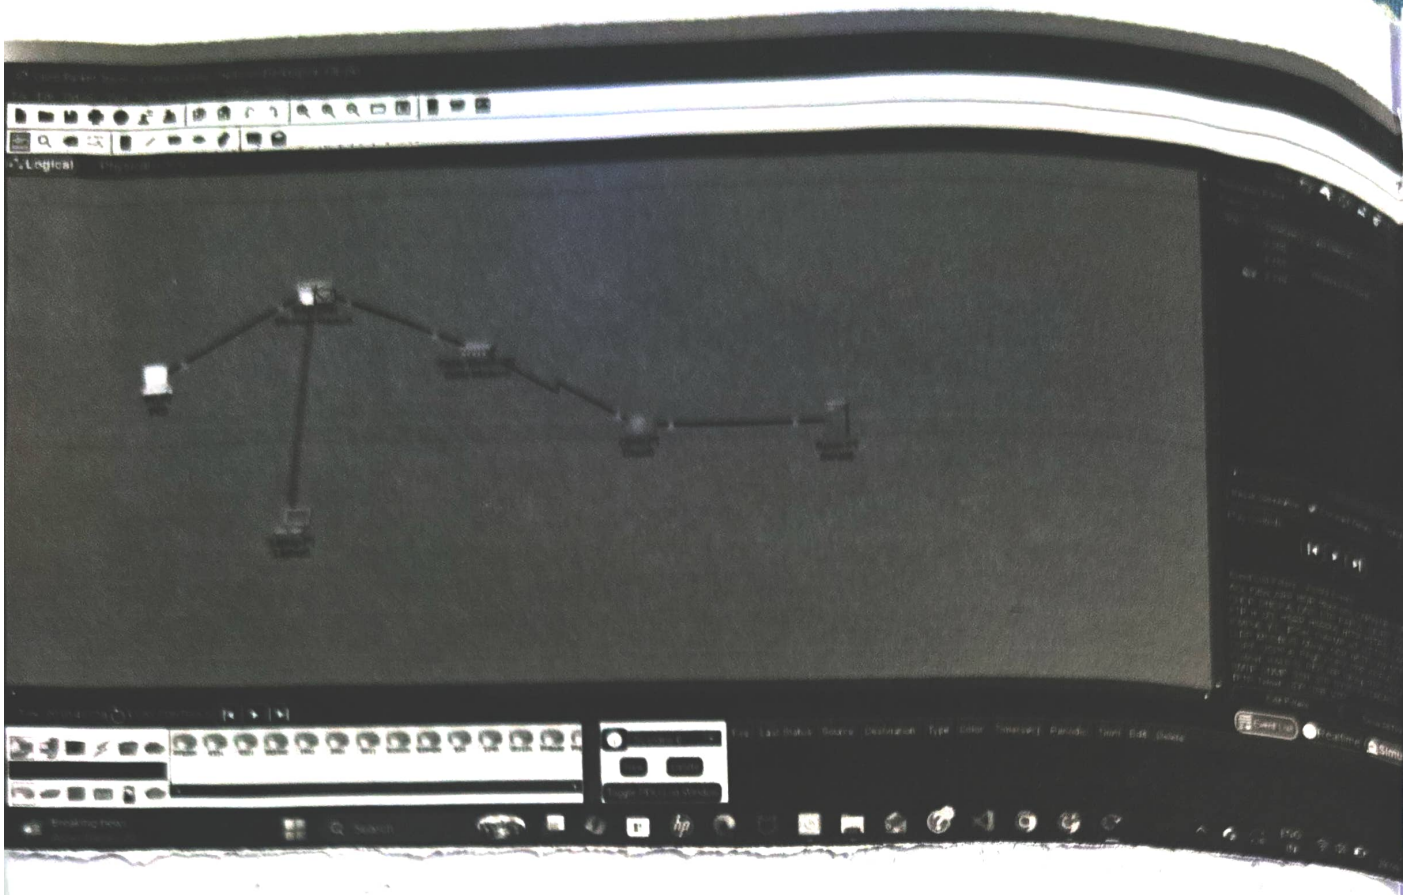

10(b) - Wireless Router

Aim:

To design and configure an Internetworking using a wireless router, DHCP server & Internet cloud.

Observation:

1) A wireless router, PC, laptop, cable modem, Internet cloud & cisco.com server are connected
2) The wireless router is configured with the SSID HomeNetwork.
3) DHCP is enabled on the wireless router
4) The PC obtains its IPv4 address automatically through DHCP
5) The cisco.com server is configured as a DHCP & DNS server.
6) The PC receives an address in the 192.168.0.x range
7) connectivity is verified using ping cisco.com.

Result:

Thus, the wireless router DHCP server and internet cloud were Succes fully configured and verified.
